

VISMED® wash ...

...the **first**
eye rinsing solution
with hyaluronic acid

For irrigation,
rewetting and
lubrication

Washes away irritants

VISMED® wash mildly and gently washes away irritants such as:

- › Cellular debris
- › Mucus filaments
- › Allergens
- › Small foreign bodies
- › Chemical agents

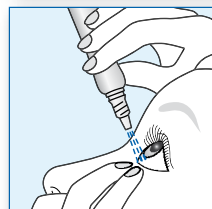

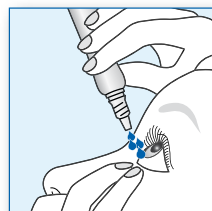

from the eye or the surface of in-eye contact lenses.

VISMED® wash can also be used in case of ocular surface disorders, blepharitis, conjunctivitis, keratitis.

VISMED® wash is the first eye rinsing solution containing 0,075% hyaluronic acid, a biopolymer naturally present in the eye that provides prolonged wetting of the ocular surface with its ability to retain water.

VISMED® wash is available in a squeezable bottle containing 20 ml of solution. The outflow can easily be adjusted by applying pressure on the body of the container.

Depending on the level of ocular contamination, the total content of one bottle may be needed to flush away, for example, mild chemicals or foreign bodies whereas 5 drops per eye are often sufficient to remove cellular debris.

...and restores

nts from your eyes...

Cellular debris

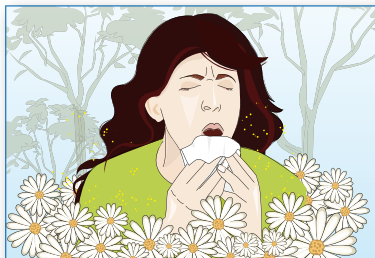

Some patients suffer from inflammation of the eyelid margin (blepharitis).

VISMED® wash removes cellular debris and abnormal secretions from the eye.

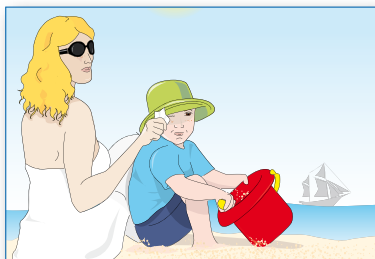

Allergens

VISMED® wash flushes away allergens from the ocular surface and thus helps to decrease ocular inflammation.

Abrasive irritants

VISMED® wash gently washes away abrasive irritants such as dust or sand that could damage the cornea, irritate eyelids and disturb the vision thereby restoring ocular comfort.

immediate ocular comfort.
